

Kyogle Landcare

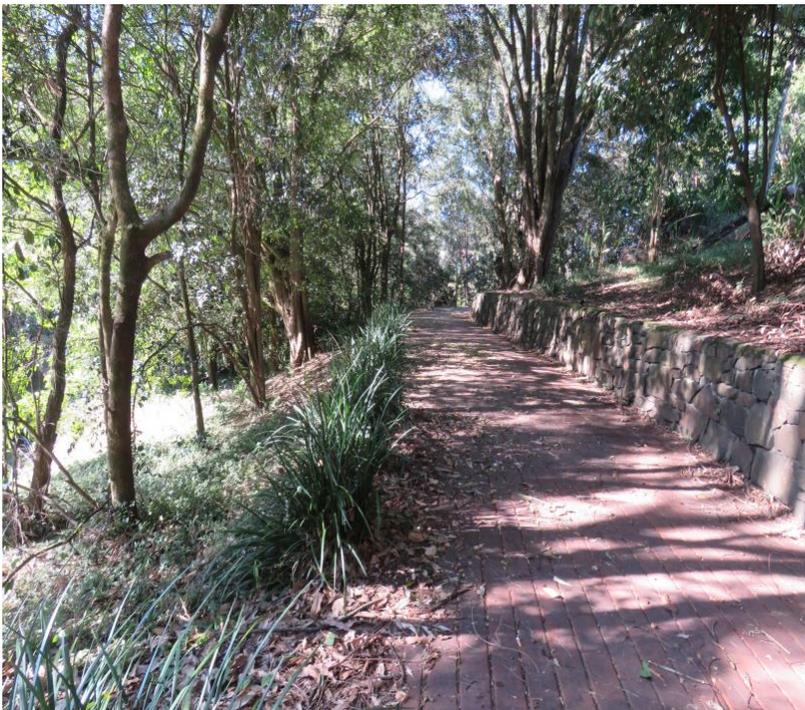

September Update

Fawcett's Creek

If you haven't taken a walk recently along Fawcett's Creek, get amongst it and do so. The transformation is remarkable! The initial work carried out through the collaboration of our local group with the Australian Conservation Volunteers is an excellent example of what "PEOPLE POWER" can achieve.

A core group meet every Tuesday at the Landcare nursery from 9 – 1 to continue the **war against weeds**. Come and join the fun. It is a rewarding and fulfilling experience.

Share your story

If you have any information that you think other Landcarer's may be interested in please email:

robdury3@gmail.com..

It would be great to include stories of what is being achieved in our Shire!!!

Horseshoe Creek

The regeneration of the riparian zone between the two wooden bridges continues with a small and dedicated team who are determined to fight the invasion and win **the war on weeds**.

These creeks are the lifeblood of the Richmond River Catchment and it is vital that Landcare continues to demonstrate what can be achieved so the community and elected council representatives can see what riparian zones should look, feel, smell, sound and taste like.

High Priority

Tuesday 4th September- Landcare meeting **6- 7.30**. BRRVLN OFFICE (next door Leading Edge) Come and share your thoughts.

Upcoming Events

- Sunday 16th September Horseshoe Creek Working Bee. Meet at 823 Horseshoe Creek Road at 9am. Refreshments provided.
- Saturday 22nd September. Fawcett's Creek Working Bee Meet at the tennis courts 9am. Refreshments provide.
- Every Tuesday 9.30 - 12 - Meet at Land care Nursery - either work in the nursery or along Fawcett's Creek or mix it up a bit and do both!

Do you want to protect and enhance the biodiversity on your land?

Find out why you should get involved in private land conservation and the benefits that exist for **YOU!**

Under the terms of the *Biodiversity Conservation Act 2016*, there are three main types of voluntary private land conservation agreements. The agreements have been designed to deliver better financial and technical support to landholders, and in doing so, create land-use options and additional income streams for rural landholders.
