

## Yellow or Hairy Pittosporum/ Brisbane Laurel

*Pittosporum revolutum*

Family: Pittosporaceae

Shrub to 3m with fragrant yellow flowers

**Distribution:** Queensland, New South Wales and Victoria

**Description:** Occasionally grows into a small tree but usually flowers and fruits as a shrub about 1-3 m tall. The flowers are followed by large orange fruit which split to reveal red seeds.

**Propagation:** Seed, ripening March-May, is easily germinated.

**Habitat:** It occurs in habitats ranging from rainforest to dry sclerophyll forests in Queensland, New South Wales and Victoria.

**Uses:** Attracts birds and butterflies.
